Summary

These cheese-wedge shaped valve caps come in two models, Presta and Schrader, perfect for most bikes and cars!

I hadn't come across a bicycle valve stem cap that looked like a piece of cheese, so I designed one for Presta valves (found on most road bikes) and another for Schrader valves (the type on many cars, older mtbs and kids bikes). I printed a bunch of them in yellow PLA at a 0.12 layer height with a 0.4mm nozzle on a textured PEI plate and they look great. I ride with them on my bike and hand them out to anyone who sees me riding with them to bring a smile to people's faces and spread the cheese love.

Please credit me if you share the model. And please do not sell these without my permission! You may, however print them and distribute them to others for free!
